

DART Real Time Bus Information

- ◉ The DeIDOT mobile app has made improvements to the DART transit feature. Now users can more easily track their selected buses by clicking the bus refocus icon .
- ◉ Riders can select a bus stop, then click on the active link to see where their bus is on its route. Previously, the bus icon would travel out of view. With the bus refocus icon, riders can just tap and the location of their bus is brought to the center of the map.
- ◉ Additionally, riders can now save their favorite bus stops by clicking the star icon on the bus stop map.
- ◉ The application was developed internally by staff members from several DeIDOT divisions, using data collected by DART's existing transit dispatch system. The DeIDOT mobile app is free and available to anyone using a smartphone device by searching for DeIDOT in the App store for iPad/iPhone or in Google play for Android). The app can also be accessed on the web via DeIDOT's interactive map found at www.deldot.gov.
- ◉ Real time information is dependent on a wide variety of factors including telecommunications, internal processing, road conditions, and other operational elements. If you have feedback about improvements to this mobile application, please [contact us](#). Please send bus service inquiries and comments to www.dartfirststate.com/feedback
